Class 4 Galvanised Conduit Tube

Technical Specification and Standards

NGN GROUP steel conduit is suitable for use in demanding environments. It exceeds the maximum "very heavy" strength classification and can be easily formed on site.

Our conduit is hot dipped galvanised after manufacture to comply with Class 4, heavy protection inside and out. Galvanising is undertaken on a purpose made plant to ensure an even coating and employs a final superheated steam blast to ensure the bore is smooth and clear of defects which might damage cable installation.

Material	Made from Grade Q195 Steel.
Manufacturing Process	Tubes are roll formed, and electrical resistance welded.
Resistance against corrosion	Hot dipped galvanised to BS EN 61386 Class 4 using a specialist superheated steam blast to ensure the bore is smooth and clear of defects that might damage cables during installation.
Resistance to compression	Tested to very heavy grade - Classification 5.
Resistance to impact	Tested to very heavy grade - Classification 5.
Tensile strength	Tested to very heavy grade - Classification 5.
Standard BS 4568 -1	Steel Conduit and fittings with metric threads
Standard BS EN 61386 - 21	Conduit systems for cable management - requirements for rigid conduit systems
Storage	Galvanised conduit should be stored in dry conditions to prevent wet storage stain. (Should this occur, it can easily be removed and is unlikely to affect resistance to corrosion)

Boxes (Malleable)

- 20/25mm Boxes - Cover fixings M4 at 50.8mm centres
- 32mm Boxes - Cover fixings M4 at 71.5mm centres
- 20mm boxes - Internal depth 25mm minimum
- 25mm boxes - Internal depth 28mm minimum
- 32mm boxes - Internal depth 37mm minimum

- Tapped M4 hole for earth terminal in base
- Manufactured to BS 4568 and BS EN 61386
- Boxes are galvanised after manufacture and meet the most demanding Class 4 corrosion protection standard.
